

Dutch multinational uses edinn M2 in its Spanish plants

Established in 1923 in Alkmaar, the Bosal Group is Dutch registered, headquartered in Lummen, Belgium. The annual turnover in 2007 was in excess of € 985 million. The Bosal Group employs over 7,000 people in 43 manufacturing plants and 27 distribution centres. Bosal's customer base includes all major car manufacturers worldwide as well as a variety of leading industrial conglomerates.

The edinn® M2 system is currently installed at the Puerto de Sagunto (Spain) production plant.

Basic installation

In 2007, Bosal used a mixed method to install edinn® M2: They contracted edinn to realize the complete edinn® M2 installation in two machines. They learned how to install and implement and their own technicians expanded the edinn® M2 system to the entire plant.

Currently, edinn® M2 controls and monitors 27 machines, contributing to Continuous Production Improvement.

Profitability

Currently the edinn® M2 system is controlling and helping to improve the company's productivity and efficiency, obtaining benefits thanks to the information and integrated tools, from the moment the system started.

According to the Production Manager, Mr. Raúl Gil: "We obtained an improvement of 10% from the moment we started the edinn® M2 system".

Own developments

Bosal has developed its own computer tools on the edinn® M2 platform. In this way, they obtain the exact documents and information reports in the format and style required by the corporation.

Continuous updates

Bosal is a client with a maintenance contract with edinn. This allows them to use the continuous support of the edinn helpdesk, obtain software updates and to influence decision making on improvements and changes of the edinn® M2 system.
