

# SUCCESS CASE CRUMAR

## Crumar saves time and money

Crumar, a leading company at the natural stone and marble sector, located in Almeria (Spain) and selling its high quality products in many countries, buys the edinn® M2 system.

Crumar uses the edinn® M2 system to integrate production at the factory with its ERP, to control and manage production orders and to increase client satisfaction around the whole world. It also controls and improves production times in all areas, in automatically controlled machines and in craftwork.

*"From the moment we installed the system, savings were immediate",* says Bienvenido Cayuela Pastor, AEMA President and General Manager of CRUMAR.

The system has been installed in collaboration with Andalusian Technological Centre for Stone (Centro Tecnológico Andaluz de la Piedra (CTAP, leader in technological development and installation of I+D+I culture in the Stone industry.

*"Edinn, with its product edinn® M2, is our strategic partner for the improvement of production and efficiency",* confirms Sandra López, Production Manager of CTAP.

The system operates 100% automatically and monitors machines and manual processes. All reports and ratios are obtained in real time.

## Visual, simple and easy to use

Internally, edinn® M2 is a very complex system, but it is very easy to use and it visualizes the information in a simple way through big buttons, texts and colors. It obligates people "to think" as less as possible and thus operators can completely focus on the production process.

## Standard Production Indicators (KPI's)

Crumar uses standard production ratios like OEE, OPC, MTBF y MTTR.

edinn® M2 calculates these ratios precisely and in real time and shows the information at the screens at the plant by means of colors in an efficient and intuitive way.

## Low costs and quick installation

Unlike other systems, edinn® M2 is normally installed in one week by one person. It is not necessary to buy additional software licenses. This means low installation and maintenance costs. The entire installation is done by highly qualified personel who manage everything: installation, configuration training, user training and an efficient help desk to resolve doubts.
