

Incaelec applies latest technologies of the market: edinn® M2

The activities of Incaelec, a company of young, dynamic and modern spirit, is linked to the automotive market, household-electric appliances, communications, etc. developing and producing wirings, plastic parts and electromechanical sets.

Incaelec is conscious that process innovation is the key to competitiveness. Therefore, industrialization engineers analyzes, develops and improves these processes, applying the latest technologies of the market at any moment.

Free edinn demo kit for 1 month

For the installation of edinn® M2 in its plant in Zaragoza, Incaelec requested an edinn demo kit. This kit was installed by a technician of edinn and monitors production through webcams. The demonstration period at Incaelec was completely free.

After the installation of the demo kit at the plant, the employees received a basic training.

Easy installation

Once installed, Incaelec tested the edinn® M2 system during 1 month. After this month, they opted for local training and information and so were able to install the entire system by themselves.

"We recommend edinn® M2 to other companies"

Nowadays, Incaelec is optimizing its machines, monitored by edinn® M2 , day to day.

Incaelec has a maintenance contract with edinn and recommends edinn® M2 to other companies.

According to César Mingueza, production manager: *"We are very pleased with edinn® M2 and that is why we recommend it to other companies"*.
