

SUCCESS CASE VICENTE GANDÍA WINERY

Leading winery uses edinn M2 to improve production

Vicente Gandía Winery was founded in 1985 by Vicente Gandía Plà. Since then, the property has kept the same name. The passion for wine was handed down over the generations with a sole objective: to improve, year on year, the winery's commitment to the world of wine.

The winery's reputation and prestige have been increased during the last years by winning more than 200 international prizes for wines as El Miracle, Hoya de Cadenas or Ceremonia.

Thanks to its spirit of ongoing growth and renewal, Vicente Gandía Winery is one of Spain's leading premium wine companies, the leading wine company in the Community of Valencia, and does business in over 85 countries across all five continents. 75% of the wine produced is exported.

Innovation

One of the main values of Winery Vicente Gandía is backing innovation as an integral element of the company and an essential ingredient in producing premium wines.

Technological innovation also plays an important role in the company. This is one of the reasons why Winery Vicente Gandía installed the edinn M2 system. With this innovative system, its production process in terms of productive and energy efficiency will be improved.

"Edinn M2 is like Google: it seems easy but is complex and powerful inside"

Edinn M2 is a very easy and simple tool to use. It is a flexible, adaptable and incredibly intuitive software system.

During the installation process at Vicente Gandía's winery, Julian Ortíz, Vicente Gandía's IT Manager, confirmed that *"Edinn M2 is like Google: it seems easy but is complex and powerful inside"*.

Total control of the production process

The edinn M2 system was installed in all production lines of the Winery. The entire process, from filling until labeling the bottles, is monitored by edinn M2.

The system operates 100% automatically and monitors machines and manual processes. All reports and ratios are obtained in real time by web.
